1point

VET Training Using the One-Point Lessons Approach

OUR GOAL

The1Point project aims to transform a standard quality assurance method and information security process used in the industry into a creative and innovative training methodology for the VET sector.

Our focus is the training of future maintenance professionals, in order to improve IT skills, foster employability and develop innovative thinking.

To do that, and in accordance with high quality VET standards, the Partners decided to take up this challenge, trying to design a model of training course never applied before, based on a brand-new philosophy that should be able to give an effective answer to the needs of modern industries, matching labour supply and demand.

ABOUT US

1Point will carry out its project activities until the end of January 2023, constantly fed by the work of a partnership coordinated by the Slovenian industrial association **TECOS** and including **Dlearn - European Digital Learning Network** (Italy), **Atlantis Engineering** (Greece), **CETEM** (Spain), **HeartHands Solutions** (Cyprus) and **CPI** (Slovenia).

1Point moves swiftly towards the finish line!

The **1Point project** is currently going through its most important phase of activity. Last April, the **partners met in Milan** (see picture), finally all present after the restrictions imposed by the pandemic, and laid the foundations for the realisation of the expected final results.

During the two-day full immersion in Milan, the document outputs that 1Point worked on in the previous project phase were analysed and finally approved. Here are the documents that will form the technical and scientific backbone of the training course:

➢ a **Training Methodology**, to map the process that is used under the Total Productive Maintenance approach in main industries and develop a new training model through an adaptive transformation of the 1Point process, specialised for the field of VET

➢ an **ECVET profile**, to provide a technical framework for the transfer, recognition and, where appropriate, accumulation of individuals' learning outcomes with a view to achieving a specific qualification

➢ the analytic **Training Content Manual**, created in accordance with the European Qualifications Framework to satisfy the needs of companies operating within the Industry 4.0 context. The 1Point training course will be aligned to the EQF level 5.

Now that the contents are complete and the course structure has been fine-tuned, the partners coordinated by the Slovenian leader TECOS are working on the definition of a suitable **Learning Motivational Environment**, i.e., the online platform that will then be tested and finally made available to the European training community. As soon as possible, the "beta" version of the training platform will be subjected to the close scrutiny of students, experts, lecturers and practitioners, who will be called upon to provide useful hints and suggestions for further improvement of the final result. Think you qualify and **want to join this panel of expert evaluators?** Send us an email at info@1pointproject.eu, or contact us via the website **www.1pointproject.eu**, and we'll be in touch!

Let's keep on talking about 1Point...

In the meantime, while the IT part is progressing, 1Point's technical partners have continued - and will continue until the end - in their relentless work of **disseminating the project**, taking advantage of every public opportunity around Europe - events, trade fairs and conferences on maintenance - to illustrate its **objectives and results** as they are achieved.

Stay connected with us, and follow all the news on the development of the modern 1Point maintenance training via the website and our social channels!
